---

APPLICABILITY

MEDICAL GYROSCOPE is a rehabilitation device designed for training with patients in a standing position (minimal height: 145 cm). The device can be used for treatment, rehabilitation and general development exercises. The medical gyroscope allows the users to perform active, free, three-dimensional movements beyond the normal vertical position. This is a unique feature that distinguishes the gyro-based trainer from all other training or therapeutic devices. Every machine is made to individual customer's order, always keeping specific needs of the customer's patients in mind.

---

Additional equipment

**Adaptation of the device for patients exercising in the seating position.**

No limits as to the height of users. Suitable for persons between 5 and 70 years of age. The device is fitted with a leather seat and durable safety belts.

**Mechanical drive (motor)** – the device can be controlled from a control cabinet via a touch screen.

Fit for a multi-level training program.

**Computer + dedicated software + measuring apparatus** to be configured to clients' individual needs. Prices of additional equipment are established individually.
